

**“THEY DID
EXACTLY WHAT
THEY WERE
DESIGNED TO DO.”**

– David Strohl, Strohl Aviation, Hazen, Arkansas

“Even though Storm Cutters are mainly advertised for cutting through power lines, I feel that they did exactly what they were designed to do this season when I flew through a radio antenna that was mounted on top of a tower at a home. I think the Storm Cutters cut through the material that wasn't hit by the prop and prevented a lot of damage that could have been done to the airframe had I not had the Storm Cutters installed.”

– David Strohl, Strohl Aviation, Hazen, Arkansas
